

  
 COAST OF LABRADOR  
**C. ST CHARLES TO SANDWICH B.**  
 Compiled chiefly from the Survey of Michael Lane 1771  
 with corrections from the Observations and Surveys of  
 Capt. H.W. Bayly & J.N. Bisset, Comd'g W. Chinnon, H.N. 1867  
 and other Officers of H.M. Navy  
 All heights are expressed in feet above high water ordinary Springs  
 in mud, s. rock, s. sand, sh. shells, s. stones  
 Magnetic Variation in 1872, nearly stationary  
 SOUNDINGS IN FATHOMS

**CAUTION.**  
 The coast of Labrador is very irregularly  
 known, many of the sounding notes and islands  
 are only approximately placed on this chart,  
 and it is believed that many more exist than  
 are now shown. The prevalence of fog has  
 made it the duty of navigators and other  
 officers to exercise caution when near the shore.
